

DID YOU KNOW ?

Photostimulation (or phototherapy) is a **non-aggressive non-thermal** treatment based on the use of different wavelengths corresponding to a precise scope of action. The **photons penetrate the skin** and are absorbed by the cells. The cells are stimulated and synthesise the other skin components.

So the production of **collagen and elastin** is stimulated and the skin is completely regenerated.

The appearance of the skin improves immediately.

A RECOGNISED AND PROVEN TECHNIQUE

Photostimulation is a technique with long clinical experience. Photons were first used by NASA to **accelerate the healing** of astronauts' wounds, and since then many clinical trials have proved their efficacy and safety in the **treatment of skin problems**. Thanks to these **stimulatory, anti-inflammatory**, analgesic and corrective **properties**, today they are applied to all areas of medicine

REJUVENATE YOUR HAIR

Phototherapy & biostimulation

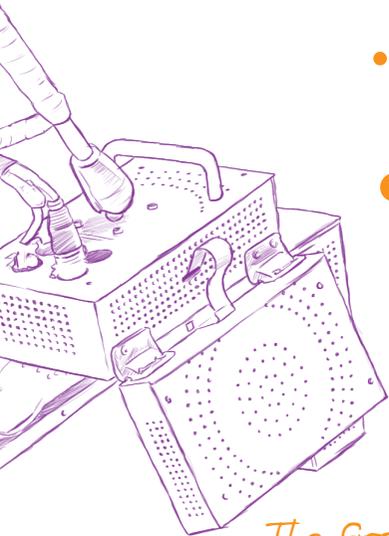

ANTI-AGING PROCESS

An exclusive combination of specific care to act directly on the scalp... .. And on skin

THE REPAIRING ENERGY OF PHOTONS

Thick, glossy hair doesn't only show our **general health** but is also a symbol of **youth** and **seductiveness**. Often hair loss or severe thinning affects our self-esteem and can affect our relations with others.

The **SPH** photostimulation device helps **make hair healthy again** by stimulating the roots and producing new, healthy hair.

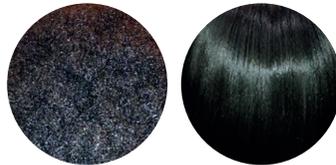

The first photostimulation device especially for hairdressing salons

Photostimulation also treats all types of **hair problems**. It can visibly **optimise the regrowth** after alopecia or chemotherapy, slow or even **stop** hair loss in cases of hair thinning, **strengthen the follicles** that are only producing fine fuzz, or consolidate implants.

SPH gives you visible, lasting results right from the first session, with cumulative effects as the treatment continues.

Optimisation of treatment

Colour, perm, Brazilian smoothing, curling, moisturising treatment, keratin treatment

Hair strengthening

Fragile, devitalised hair that breaks easily

Preventive treatment

Prevents hair loss

Corrective treatment

Stimulates hair growth

Hair treatment

Face care

Radiance

Refining the skin texture, immediate rejuvenating effect

Decreases

Wrinkles, blemishes, scars, acne, etc.
